

Benzoic Acid

What is it?

Benzoic acid is a colorless compound that is found in many plants. It is the metabolized form of benzyl alcohol. Benzoic acid is used as a preservative in some cosmetics to inhibit the growth of yeast, mold, and bacteria.

BENZOIC ACID can also be known as:

- Flowers of Benjamin
- Flowers of benzoin
- Benzenecarboxylic acid
- Carboxybenzene
- Benzeneformic acid
- Benzenemethanoic acid
- Dracylic acid
- Phenylcarboxylic acid

Some Possible Uses of BENZOIC ACID /

Where it might be found:

- Personal care items (i.e. facial cleanser, shampoo, conditioner, moisturizer, make up, deodorants)
- Some pharmaceutical preparations (as an anti-fungal agent)

Other products that cross-react with BENZOIC ACID:

- Benzoates
- Other compounds with benzoic acid in the name

What should I do to avoid BENZOIC ACID?

Patients who have this allergy should avoid contact with all related compounds as written above.

To avoid this allergen, check the complete ingredient list of each product you use. For items

already at home with no ingredient list, go to the store and inspect the original box or package. Some products' ingredient lists are available on the internet at the manufacturer's or store's website.

To find a possible workplace exposure, check the complete ingredient list of every item you use. You may need to contact the manufacturer to learn more.

If you must come in contact with this allergen in your work or as you care for others, wear gloves made of rubber, nitrile, or vinyl.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help

manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
