

Benzophenone-3 / Oxybenzone

What is it?

Benzophenone-3 or oxybenzone is an ultraviolet absorber (a.k.a sunscreen) used for sun protection. It is widely incorporated in sunscreens and also makeups, lip balms, hair products, plastics, and textiles to either provide sun protection or to prevent UV-degradation of the product in the bottle. It is also used at times in some perfumes for its rose-like scent.

BENZOPHENONE-3 / OXYBENZONE can also be known as:

- 2-hydroxy-4-methoxybenzophenone
- 2-benzoyl-5-methoxyphenol
- 2-Hydroxy-4-methoxyphenyl-phenyl methanone
- 4-Methoxy-2-hydroxybenzophenone
- Advastab 45
- Anuvex
- Benzophenone 3
- Chimassorb 90
- Cyasorb UV 9
- Escalol 567
- Eusolex 4360
- Kahscreen B2-3
- Milestab 9
- MOB
- Ongrostab hmb
- Oxybenzone
- Spectra-Sorb UV - 9
- Syntase 62
- Sunscreen us 15
- UF 3
- Uvinul M-40
- Uvinul 9
- Uvostat 24

Some Possible Uses of BENZOPHENONE-3 /

Where it might be found:

- Sunscreens, Sunblock
- After-sun products
- Facial cleanser, scrub
- Facial moisturizer
- Facial toner/astringent
- Anti-wrinkle cream
- Make up, foundation, concealer
- Lipstick, lip balm, lip gloss
- Moisturizer, cream, lotion
- Bath or body oil
- Body wash, Bubble bath
- Shampoo, Dry shampoo
- Hair conditioner
- Hair gel, mousse, hair spray
- Aftershave
- Hand sanitizers
- Hand soap
- Nail polish
- Perfume, cologne, body spray
- Insect repellent with sunscreen
- Color preserver in paints and varnishes
- Color retainer in fluorescent lacquers
- Protection against fading in textiles and plastics
- UV filter in sun protective clothing
- Color preserver in dental composite fillings
- Product for drug, dye, pesticide manufacture
- Car wash gel
- Component of clear protective window shades
- UV protectant in polystyrene, acrylic, and rubber

Benzophenone-3 / Oxybenzone

Some individuals develop an allergic reaction to oxybenzone/benzophenone-3 only on exposure to sunlight.

Other products that may cross-react with BENZOPHENONE-3 / OXYBENZONE:

Some individuals sensitive to benzophenone-3 will also react to benzophenone-4, also known as sulisobenzene. They may also react to dioxybenzone, and other chemicals containing the word benzophenone.

People with allergy to benzophenone-3 may rarely also react to the ultraviolet filter octocrylene and the topical nonsteroidal anti-inflammatory medication, ketoprofen. Octocrylene and ketoprofen will not automatically be excluded in the CAMP app.

What should I do to avoid BENZOPHENONE-3 / OXYBENZONE?

To avoid oxybenzone, check the complete ingredient list of each product you use. For products already at home that do not list ingredients, go to the store and inspect the original box or package.

Some products' ingredient lists are available on the internet at the manufacturer's or store's website.

You may be exposed to oxybenzone through contact with a partner who uses items that contain it. Ask your hairdresser, masseuse, barber, physician, and nurse to avoid using oxybenzone in your care.

To find a workplace exposure, check the Material Safety Data Sheet (MSDS) as you are able. Look at the ingredient labels of all products encountered. It may be necessary to contact the manufacturer to learn if this sunscreen is present in a commercial item. If you cannot eliminate contact, wear protective gloves.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
