

Benzyl Salicylate

What is it?

Benzyl salicylate is a widely used solvent with a slight pleasant odor. It is formed by combining benzyl alcohol with salicylic acid. Benzyl salicylate is a fragrance.

Products with the terms *natural*, *unscented*, *hypoallergenic*, and *fragrance free* are not regulated and thus may contain fragrance. Do not trust these labels. However, know that true *fragrance-free* products do exist.

BENZYL SALICYLATE can also be known as:

- Salicylic acid benzyl ester
- 2-hydroxybenzoic acid phenylmethyl ester
- Benzyl o-hydroxybenzoate

Other products that might react like BENZYL SALICYLATE:

- Benzyl alcohol
- Salicylic acid
- Fragrance
- Benzyl salicylate may cross react with other salicylates

What should I do to avoid BENZYL SALICYLATE?

Avoid using any product that contains benzyl salicylate or one of its other names listed above.

It is best to avoid all fragrance. Even if marketed as *unscented* or *fragrance-free*, these products can contain fragrance. Look for fragrance, plant, or botanical names on labels. For products at home with no ingredients, go to the store to inspect the original package or look at the manufacturer's or store's website.

You may have to avoid airborne fragrance. For example, candles and incense. Exposure may also occur from contact with partners that use fragrance.

To identify workplace exposure, check ingredient lists. Sometimes fragrance is present even though not listed. You may need to contact the manufacturer. Material Safety Data Sheets (MSDS) sheets usually do not include the full
