Jet fuels
Rubber
Plastics
Polyethylene, e.g. gloves
Paints
Glues
Adhesives
Embalming fluid

How to avoid it:

To avoid BHA check the complete ingredient list of each product you use or eat. For products already at home that do not list ingredients, go to the store and inspect the original box or package. Some products' ingredient lists are available on the internet at the manufacturer's website, the store's website, or at websites like <http://householdproducts.nlm.nih.gov>, <http://www.cosmeticsdatabase.com>, or <http://www.drugstore.com>.

Ask your aesthetician, masseuse, physician, nurse, and others to avoid using products containing BHA in your care.

To identify possible workplace exposure, read the complete ingredient label of every product encountered. Wear protective rubber, nitrile, or vinyl gloves if you must handle items containing this chemical.
