

Butylhydroxyanisole

What is it?

Butylhydroxyanisole (BHA) is an antioxidant used to help preserve foods, cosmetics, medicines, and industrial products.

BHA can also be known as:

- Butyl hydroxyanisole
- Butylated hydroxyanisole
- Butyl methoxyphenol
- 2-tert-butyl-4-methoxyphenol
- 3-tert-butyl-4-hydroxyanisole
- 4-methoxy-2-tert-butylphenol
- tert-butylhydroxyanisole
- tert-butyl-4-hydroxyanisole
- Tert-butyl-4-methoxyphenol
- Tert-butyl-p-hydroxyanisole

Some Possible Uses of BHA / Where it might be found:

- Artificial nails
- Cold & flu medications
- Anti-diarrhea medications
- Lipstick, lip gloss
- Hemorrhoidal cream & ointments
- Yeast infection treatments
- Chewing gum
- Prescription pills
- Animal feed
- Petroleum products
- Jet fuels
- Rubber
- Plastics
- Polyethylene, e.g. gloves
- Paints
- Glues
- Adhesives
- Embalming fluid

Other products that might react like BHA:

- none

What should I do to avoid BHA?

To avoid BHA, check the complete ingredient list of each product you use. For products already at home that do not list ingredients, go to the store and inspect the original box or package. Some products' ingredient lists are available on the internet at the manufacturer's or store's website.

Ask your aesthetician, masseuse, physician, nurse, and others to avoid using products containing BHA in your care.

To identify possible workplace exposure, read the complete ingredient label of every product encountered. Wear protective rubber, nitrile, or vinyl gloves if you must handle items containing this chemical.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
