lubricant in plastics
manufacture

How to avoid it:

Avoid using any product that contains **cocamide DEA**. It is important to check the label of each product you use to find the complete ingredient list. If cocamide DEA is present, one of its names listed above should appear in the ingredients. If no ingredient list is present, go to the store and inspect the original box or package. Some products' ingredient lists are available on the internet at the manufacturer's website, the store's website, or websites such as <http://householdproducts.nlm.nih.gov>, <http://www.cosmeticsdatabase.com>, or <http://www.drugstore.com>.

For possible workplace exposure, check the complete ingredient list of every product you encounter.

If you must come in contact with cocamide DEA at work or as you care for children, elders, or pets, wear protective gloves made of rubber, nitrile, or vinyl.

Ask your hairdresser, barber, masseuse, attendant, nurse, and others to avoid using products containing this allergen in your care.

By reading ingredient labels, you should be able to avoid this allergen and find safe alternatives that are free of it.

Cocamide DEA is different chemically from cocamide MEA and cocamidopropyl betaine, which are also derived from coconut. It usually does not show cross-sensitivity with them.
