

Formaldehyde

What is it?

Formaldehyde is a preservative. It can be used to disinfect. It may be found in industrial products and may rarely be found in personal care products.

FORMALDEHYDE can also be known as:

- Formalin, Formic aldehyde
- Methanol, Methyl aldehyde
- Oxo methane, Oxy methylene
- Morbicide acid, Methylene oxide

Other products that might react like FORMALDEHYDE:

Formaldehyde releasers are chemicals that may release formaldehyde. For this reason, if you are allergic to formaldehyde, you may also need to avoid the formaldehyde releasers, such as:

- Imidazolidinyl urea
- Diazolidinyl urea
- Dimethyl dimethyl (DMDM) hydantoin
- Quaternium-15
- Bronopol (2-bromo-2-nitropropane-1,3-diol)
- Hexahydro-1,3,5-tris(2-hydroxyethyl)-s-triazine
- Tris nitromethane (i.e. Tris Nitrol)
- Sodium hydroxymethylglycinate
- Dimethyl imidazolidinone
- Dimethylol dihydroxyethyleneurea
- Melamine, Methenamine
- 1-(cis-3-Chloroallyl)-3,5,7-triaza-1-azoniaadamantane chloride
- Dowicil 75, Dowicil 100, Dowicil 200, Germall 116, Glydant, Grotan BK, Grotan B

- Triadine 10, Onyxdine 200, Onyxdine 500, Vancide TH, Myacide BT, Myacide AS

Quaternium compounds other than quaternium-15 (i.e. quaternium-18) do NOT release formaldehyde.

Some Possible Uses of FORMALDEHYDE / FORMALDEHYDE RELEASERS / Where it might be found:

- Make-up, make-up remover, toner
- Cleanser, cream, lotion, after shave
- Shampoo, conditioner, hair styling products
- Soap, body wash, bubble bath
- Mouthwash, root canal disinfectant
- Antiperspirant, hygiene spray
- Sunscreen, After-sun products
- Nail polish, cuticle remover, nail hardener
- Hand soap
- Laundry detergent, fabric softener
- Facial tissue, moist wipes, baby wipes
- Pet care items
- Paper (i.e. products, pulp, glazed)
- Newsprint, cardboard, magazines
- Grocery sacks, plastic bags
- Wet strength paper towels
- Money
- Photocopy toner, Photo developer
- Casts
- Foam insulator
- Bonded leather, fire resistant items
- Fertilizer
- Mildew resistant finish, preservative
- Embalming fluid, tissue fixative
- Waterproof glue, adhesive, rubber cement
- Latex emulsion, ink, etching material

DISCLAIMER: Every effort is made to ensure the accuracy of the information provided herein. Formaldehyde

- Paint (i.e. water based, primer, stripper)
- Wax, polish, wood cleaner, finish
- Plywood, masonite, particle board, MDF
- Asphalt shingles, flooring, filling agent
- Wood, coal, kerosene, charcoal smoke
- Smoke from cigars and cigarettes
- Natural gas combustion
- Tattoo ink

Other sources of FORMALDEHYDE / FORMALDEHYDE RELEASER exposure:

Some topical medicated products may contain formaldehyde and/or formaldehyde releasers.

Some examples include:

- Acne pads and cleansers
- Antifungals
- Anti-itch cream/gel/lotion
- Antiseptic spray
- Atopiclair
- Calcipotriene cream
- Corticosteroids (clobetasol emollient cream, fluticasone cream and lotion, halobetasol cream)
- Crotamiton cream and lotion
- Ketoconazole shampoo
- Permethrin cream

Do not wear permanent press, wrinkle or crease resistant, or wash and wear **fabric/clothing**. Do not wear static, water, and mildew resistant, or flame-retardant items. Wash new items with 1 to 2 cups of powdered milk before use. Organic cotton and Oeko-Tex should be safe to wear.

Formaldehyde may be in **paper** items, such as:

- Diapers, pads, and tampons
- Sterile gowns, caps, drapes, and masks

- Upholstery/carpet fabric, padding, backing
- Filters, envelopes, tags, labels
- Insulation, roofing items, geo textiles

Particle board, MDF, and plywood may contain formaldehyde glue. Saw dust may cause a rash.

What should I do to avoid FORMALDEHYDE?

Check the ingredients of all items you use. Look for the names above. Products change often, so be sure to read labels. For products already at home, go to the store and inspect the original package. Or, look at the manufacturer's or store's website.

Tell your health care providers and others that take care of you about your allergy.

To find a possible workplace exposure, check the ingredients list. Consult Material Safety Data Sheets (MSDS) too. Or, contact the manufacturer. Use of protection (i.e. clothing) or avoidance (i.e. a change in jobs) may be necessary.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
