

Fragrance Mix I

What is it?

Fragrance Mix I is a blend of fragrances. Fragrances give an aroma to a product. They are often mixtures which create a unique scent. Almost all products have fragrance. Products with the terms *natural*, *unscented*, *hypoallergenic*, and *fragrance free* are not regulated and thus may contain fragrance. Do not trust these labels. However, know that true *fragrance-free* products do exist.

Fragrance Mix I is a blend of several substances including oak moss absolute, cinnamic aldehyde, cinnamic alcohol, a-amyl cinnamic alcohol (amyl cinnamaldehyde), geraniol, hydroxycitronellal, isoeugenol, eugenol, and sorbitan sesquioleate.

FRAGRANCE can also be known as:

- Parfum, perfume, cologne, essential oil
- Masking fragrance
- Botanicals (i.e. fruit or flower oil, extract, essence)

Some Possible Uses of FRAGRANCE / Where it might be found:

Personal Care Products

- Liquid and bar soap, cleansers
- Cream, lotion, oil
- Bath oil, gel
- Shaving lotion, after shave
- Shaving cream, gel, hair removal cream

- Perfume, cologne, body mist

- Anti insect and pest products
- Wax, polish
- Paint, paint thinner, turpentine
- E cigarettes, scented or flavored tobacco
- Air vent systems (i.e. hotels, casinos)

Allergens that may cross-react with FRAGRANCE:

- Propolis
- Colophony

What should I do to avoid FRAGRANCE MIX I?

It is best to avoid all fragrance. As the terms *unscented* or *fragrance-free* are not regulated, products with these claims may still contain fragrance. Look for fragrance, plant, or botanical names. For products at home with no ingredients, inspect the original package. Or, look at the manufacturer's or store's website.

You may have to avoid airborne fragrance. For example, candles and incense.

Exposure may also occur from contact with partners that use fragrance.

Alert your dentist, medical providers, hairdresser, and others about this allergy.

To identify workplace exposure, check ingredient lists. Sometimes fragrance is present even though not listed. You may need to contact the manufacturer. Material Safety Data Sheets

(MSDS) usually do not include a complete ingredient list. Substitute fragrance-free alternatives, or wear rubber or vinyl gloves.

CONSTITUENTS OF FRAGRANCE MIX I:

Alpha amyl cinnamic alcohol has the odor of jasmine.

Cinnamic alcohol has the odor of hyacinth. It can occur in natural fragrance, like Balsam of Peru, storax, cinnamon leaf, hyacinth, and propolis.

Cinnamic aldehyde is in hyacinth, spices, oils (cinnamon, ceylon, cassia), Balsam of Peru, Tolu.

Eugenol has a clove or carnation smell. It is in oil of clove and cinnamon. It is in roses, carnations, violets, and hyacinths. It is in bay, patchouli, pimento, calamus, cananga, camphor, nutmeg, and sassafras. It can be a meat preservative.

Geraniol has a rose odor. It is in oil of palmarosa, lavender, geranium, rose, jasmine, and citronella.

Hydroxycitronellal is a synthetic lily of the valley.

Isoeugenol has a clove-like odor. It is a by-product in the production of vanillin. It is in oil of nutmeg, clove, tuberose, jonquil, and ylang-ylang.

Oak moss absolute is an essential oil extracted from lichen. It has a woody masculine odor.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
