

Fragrance Mix II

What is it?

Fragrance Mix II is a blend of fragrances.

Fragrances give an aroma to a product. They are often mixtures which create a unique scent.

Almost all products have fragrance. Products with the terms *natural*, *unscented*, *hypoallergenic*, and *fragrance free* are not regulated and thus may contain fragrance. Do not trust these labels. However, know that true *fragrance-free* products do exist.

Fragrance Mix II is a blend of several substances including Lyrall, Citral, Farnesol, Citronellol, Hexyl cinnamic aldehyde, and Coumarin.

FRAGRANCE can also be known as:

- Parfum, perfume, cologne, essential oil
- Masking fragrance
- Botanicals (i.e. fruit or flower oil, extract, essence)

Some Possible Uses of FRAGRANCE/Where it might be found:

Personal Care Products

- Liquid and bar soap, cleansers
- Cream, lotion, oil
- Bath oil, gel
- Shaving lotion, after shave
- Shaving cream, gel, hair removal cream
- Perfume, cologne, body mist
- Make-up, make-up remover, toner
- Lip balms
- Deodorant, anti-perspirant
- Anti-aging cream
- Sunscreen, sunless tanner
- Powders (body, talcum, baby, foot)
- Analgesic rub

- Ointment (i.e. diaper or medicated)
- Sanitary napkins/pads
- Hygiene spray, rinse

Fragrance Mix II

What should I do to avoid FRAGRANCE MIX?

It is best to avoid all fragrance. As the terms *unscented* or *fragrance-free* are not regulated, products with these claims may still contain fragrance. Look for fragrance, plant, or botanical names on ingredient lists. For products at home with no ingredients, inspect the original package or look at the manufacturer's or store's website.

You may have to avoid airborne fragrance. For example, candles and incense.

Exposure may also occur from contact with partners that use fragrance.

Alert your dentist, medical providers, hairdresser, and others about this allergy.

To identify workplace exposure, check ingredient lists. Sometimes fragrance is present even though not listed. You may need to contact the manufacturer. Material Safety Data Sheets (MSDS) sheets usually do not include the full ingredient list. Substitute fragrance-free alternatives or wear rubber or vinyl gloves.

CONSTITUENTS OF FRAGRANCE MIX II:

Citral, from oil of lemon grass, gives citrus notes to floral fragrance blends. It is in verbena and orange oils.

Citronellol comes from citronella oil. It, along with geraniol, comprises geranium oil, and is used in perfume production.

Coumarin comes from plants or can be synthetic. It smells like mown hay and tastes like vanilla.

Farnesol is found in orange blossoms, rose, jasmine, or linden flowers. It has biocidal activity.

Hexyl cinnamic aldehyde has a waxy jasmine-like scent.

Lylal has a synthetic delicate lily-like scent. It is often found in fine fragrances.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
