

Oleamidopropyl Dimethylamine

What is it?

Oleamidopropyl dimethylamine is an emulsifier, which helps water and oil mix. It is used in cosmetics, lotions, and shampoos. It results from the reaction of dimethyl aminopropylamine (DMAPA) with oleic acid. Oleamidopropyl dimethylamine belongs in the chemical class of amidoamines.

OLEAMIDOPROPYL DIMETHYLAMINE can also be known as:

- Dimethylamino propyl oleamide
- (Dimethylamino) propyloleamide

Some Possible Uses of OLEAMIDOPROPYL DIMETHYLAMINE and cross reactors / Where it might be found:

- Baby wipes, Body wipes, Face wipes
- Bar soap, body wash, body scrub
- Shower or bath gel, Bubble bath
- Body creams and lotions
- Shampoo, Dandruff shampoo
- Hair conditioner
- Hair mousse, gel, foam, detangler
- Hair bleach, Hair color
- Facial cleanser, wash
- Make up remover, Face masks
- Face creams and lotions, toner
- Anti-aging products, Eye creams
- Makeup: bronzer/highlighter, concealer, powder, foundation, lip balm, lipstick, eyeliner, brow gel/styler
- Shave gel, shaving cream, after shave
- Hand cleanser, Liquid hand soap
- Mouthwash, Toothpaste
- Contact lens cleaner, solution
- Acne wash, cleanser, scrub, treatment

- Anal hygiene product, hemorrhoid wipes
- Antiseptic, wound care products
- Feminine hygiene products
- Household cleaners
- Dish soap
- Laundry detergent
- Pet care items

Other products that might react like OLEAMIDOPROPYL DIMETHYLAMINE:

- Amidoamine (stearamidopropyl dimethylamine)
- Dimethylaminopropylamine (DMAPA)
- Cocamidopropyl betaine (CAPB)
- Ricinoleamidopropyl dimethylamine
- Tallowamidopropyl dimethylamine
- Lauramidopropyl dimethylamine
- Myristamidopropyl dimethylamine

Dimethyl aminopropylamine (DMAPA) could be left over as an impurity in the production of Oleamidopropyl dimethylamine, and it may increase potential cross reactions. DMAPA and amidoamines are also used as starting materials for other surfactants (i.e. cocamidopropyl betaine).

What should I do to avoid OLEAMIDOPROPYL DIMETHYLAMINE?

Avoid using any product that contains this allergen. Read the ingredient list on the label of everything you use. Look for one of the names above. If no ingredient list is present, go to the store and inspect the original box or package. Some products' ingredient lists are available on the internet at the manufacturer's or store's website.

Oleamidopropyl Dimethylamine

To find a possible workplace exposure, check the ingredient list of each product you encounter.

Ask your hairdresser, barber and medical provider to avoid using products that contain this allergen in your care. If you must come in contact with this agent as you care for others, wear nitrile, rubber, or vinyl gloves.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
