

# Tosylamide Formaldehyde Resin

## What is it?

Tosylamide formaldehyde resin (TSFR) is a polymer used in many nail polish products to improve their strength, gloss, flow, and adhesion.

The allergic reaction to TSFR commonly shows up at sites touched by the fingers. Skin reactions may occur on the eyelids or sides of the neck, around the mouth and chin, on the upper chest, in the ear, on the genital area, or around the rectum. People who bite their nails may have dermatitis of their lips. Occasionally the skin around the nails becomes inflamed.

Nail polish is most sensitizing before it dries and hardens completely.
