Triethanolamine

If you work in an industrial setting, it is necessary to ensure that triethanolamine is not used at any stage or in any products used during manufacturing.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
