

Ylang-Ylang

What is it?

Ylang-ylang oil is an oil derived from the flower of a tree that grows in the rainforests of southeast Asia. It contains many fragrant substances.

Fragrances give an aroma to a product. They are often mixtures which create a unique scent. Almost all products have fragrance. Products with the terms *natural*, *unscented*, *hypoallergenic*, and *fragrance free* are not regulated and thus may contain fragrance. Do not trust these labels. However, know that true *fragrance-free* products do exist.

YLANG-YLANG can also be known as:

- Cananga odorata
- CAS RN: 8006-81-3
- FEMA No. 3119

Other products that may cross-react with YLANG-YLANG:

- Other fragrances
- Benzyl salicylate
- Benzyl alcohol
- Propolis

What should I do to avoid YLANG-YLANG?

It is best to avoid all fragrance. Even if marketed as *unscented* or *fragrance-free*, these products can contain fragrance. You may have to avoid airborne fragrance, for example, candles and incense. Exposure may also occur from contact with partners that use fragrance.

To identify workplace exposure, check ingredient lists; you may need to contact the manufacturer. Material Safety Data Sheets (MSDS) sheets usually do not include the full ingredient list.

In addition, the ACDS Contact Allergen Management Program® (CAMP®) can help manage contact dermatitis. It helps to find products that are safe to use by creating a list of products that do not contain one's allergens. For more information about CAMP®, please ask your doctor or visit www.contactderm.org.
